Professional Summary

Backend-focused Software Engineer specializing in scalable, distributed backend systems using Node.js, Express.js, Redis, and MongoDB. Reduced job failure rates from 60% to 18% and achieved 38 req/sec throughput through concurrency tuning and queue-based architecture. Proficient in JWT authentication, REST API design, and real-time systems via Socket.io, with multiple production-deployed systems built and shipped end-to-end.

SKILLS

Languages: JavaScript (ES6+), Java, Python

Backend: Node.js, Express.js, REST APIs, MVC Architecture, BullMQ, Socket.io

Databases: MongoDB, MySQL, Redis

Systems: Distributed Systems, Microservices, Queue-Based Processing, Event-Driven Architecture

Testing: API Testing & Validation (Postman)

Tools: Git, GitHub, Postman, Render, Vercel, Stripe API

Security: JWT, Rate Limiting, Input Validation, CORS

Frontend: React.js, Redux Toolkit, Tailwind CSS

EXPERIENCE

Freelance Full Stack Developer | Self Employed | Jan 2025 - Present

- Developed and deployed production-ready web applications using React.js, Node.js, Express.js, MongoDB, and MySQL for paying clients.
- Built secure REST APIs, authentication systems, and database-driven workflows supporting real-world business requirements.
- Delivered 4 production applications for paying clients across healthcare, edtech, and food & beverage managing full project lifecycle from requirement gathering to deployment independently.

PROJECTS

Job Processing System (Node.js, BullMQ, Redis, MongoDB, Socket.io) [Live](#) [Github](#)

- Engineered a distributed job processing system using Node.js, BullMQ, and Redis with worker-based concurrency, retry handling, and backpressure management, reducing job failure rate from 60% to 18%
- Achieved 38 req/sec throughput under 100+ concurrent users (82% success rate) by optimizing worker concurrency, queue throughput, and processing delays via k6 load testing
- Built a rate-limited API layer (18% throttling) ensuring stable, fault-tolerant execution under high-traffic conditions
- Integrated Redis Pub/Sub and developed a real-time monitoring dashboard using Socket.io, enabling scalable event-driven updates and live system visibility

Scalable Backend API System (Node.js, Express.js, MongoDB, Redis, Cloudinary) [Live](#) [Github](#)

- Architected a production-grade backend using MVC architecture with independently testable, modular service structure
- Established JWT-based authentication with token rotation and hashed storage, improving session security
- Improved API performance by 30% using Redis caching with optimized invalidation strategies
- Engineered secure workflows including email verification, password reset, and enforced API security best practices (validation, sanitization, rate limiting, Helmet, CORS)

Clinic Appointment Management Platform (React.js, Node.js, Express.js, MongoDB) [Live](#) [Github](#)

- Architected a full-stack clinic management system with dual React.js applications (patient portal + admin dashboard), supporting appointment scheduling, therapist management, and clinic operations.
- Built 15+ REST APIs for appointment booking, therapist profiles, and status tracking, backed by indexed MongoDB schemas for optimised query performance.
- Secured the platform with JWT auth and RBAC (patient/admin roles) and automated booking confirmations and reminders via Brevo, reducing manual follow-up for clinic staff.

EDUCATION

Vardhaman College Of Engineering

Bachelor of Technology in Artificial Intelligence and Data Science

2021 - 2025

CGPA - 8.56
